

Your Yummy Tummy Pasta Website is overwhelmed by the massive global response from your fun community of fellow Pasta Lovers that you have created. After flying around the world in your new Global 7000 Plane, you have noticed that everyone is now using cell phones and this may be a good time to upgrade your Yummy Tummy Website. You overheard your techie assistant talking about something called jQuery Mobile so let's do some research into what the cool people already know.

jQuery Mobile is an HTML5-based user interface system designed to make responsive web sites and apps that are accessible on all smartphone, tablet and desktop devices. It is built on the rock-solid jQuery and jQuery UI foundation, and offers Ajax navigation with page transitions, touch events, and various widgets. Its lightweight code is built with progressive enhancement, and has a flexible, easy theme design.

This new rollout has created an insider buzz in both Hollywood and Silicon Valley! Venture Capitalists are calling to fund your new Yummy Tummy Pasta Next-Gen Game! Producers are calling for the screen rights to your Yummy Tummy Pasta Film!

For now, you are too busy chilling with your BFF, sharing smiles beneath a shady palm tree, on a secluded beach, under a setting sun. It won't be too long before you get back into the game and start returning phone calls. Until then, don't forget about us little guys who ran all of the errands, brought you coffee and kept the momentum going. Good luck!

Trivia Question: What Film? / Actors?

Let me get this straight. You want me to let my client of 15 years, one of my best friends, die in the jungle alone, for some money and a G5?

Yes.

[*pause*] A G5 airplane?

[*whispering*] Yes... and lots of money... playaaaa!
