

Your Yummy Tummy Pasta website has become an international phenomenon. All of the red carpet photo-ops, speaking engagements and autograph seeking fans have taken up too much of your private time. After seconds of deep thought, you have come up with a solution to spread "love for pasta" using your computer coding skills which will free up your valuable time once again to spend with your neighbor who enjoys sharing smiles.

1. This goes inside the source code in the head above the `</head>`

```
<script type="text/javascript" src="js.js"></script>
```

If you use my CSS3, you will have to delete your CSS3 link and link my CSS3.

2. Create a new blank file; name it: js.js The js stands for javascript. Save it in your folder.

Use the force and find the code to put into your new external javascript file.

The answer is out there!

Hint: For those who do not want to practice coding.

Control A = Select All

Control C = Copy

Control V = Paste

Don't forget to save the images to your folder. You can also create your own images or grab your own. Just make sure that you save them with the same name  
heart  
smile  
so that DW can find them.
